

FYP Summary

TaskPulse: Efficient Task & Project Management for Remote Teams

TaskPulse is a web-based application designed to enhance task and project management in remote work environments. The system provides a unified platform for creating, assigning, and prioritizing tasks while promoting collaboration and communication among distributed teams. It integrates key features such as real-time synchronization, time tracking, daily standups, document management, and instant messaging to ensure efficient coordination and transparency. TaskPulse also supports screen recording and reporting tools, enabling managers to monitor productivity and performance effectively.

By centralizing communication and task management, the system eliminates the need for multiple disjointed tools, reducing confusion and improving accountability. Developed with a focus on usability and reliability, TaskPulse aims to address the major challenges of remote work such as fragmented communication and limited visibility by offering an all-in-one solution that empowers teams to stay organized, informed, and productive.
